

# INTERGRATED RECEPTION SYSTEM (IRS)

An **Integrated Reception System (IRS)** provides broadcast signals from **multiple sources** to **multiple outlets**, via a single aerial cluster and signal booster-distributor. Most communal dwelling buildings are now served with an IRS.

Our team of **experienced engineers** will undertake a **detailed site survey**, with the client's specification in hand, to design and install a system that provides the best services.

## Guaranteed Quality

IRS guarantees **perfect digital quality** television and radio reception for all users within a residency. IRS can offer **4K quality**, as well as pay and movie channels, and offers the user free choice across the board.

## Aesthetics of the Building

A single, **well concealed** satellite dish on the roof can supply an entire apartment complex with digital TV and radio signals.

## Audio Visual System

Whether your business or home requires a state of the art audio visual system, **TCS** can supply **backbone systems** so that you can push images and audio around the building in multiple or single groups.

**For more information on IRS installations for your business, our team of networking professionals are always on hand to offer support and advice**
