

WIRELESS

The **TCS** engineers are experts in installing **wireless networks**. Wireless is a term used in computer networking where there are no physical wires connecting the sender and receiver. Instead it uses **radio waves** to connect devices to the internet and any business networks.

There are 4 main types of wireless networks:

- **Local Area Network (LAN)**

Links multiple devices within a distinct area (such as an office) to a server.

- **Metropolitan Area Networks**

(MAN)

Connects several LANs.

- **Wide Area Network (WAN)**

Covers larger areas such as towns and cities.

- **Personal Area Network (PAN)**

Connects devices in a very short range.

For more information on Wireless Installations for your business, our team of networking professionals are always on hand to offer support and advice
